

The New Classic Test Tool For Coaxial Cable

PT-1

NEW!
Standard AAA Battery
Cost-saving
longer life

NEW!
Rugged Aluminum
Construction & High-Tech
Circuitry
Lighter weight
& Higher
efficiency

Replaceable
Push-on F-Connector

Based on the original Pocket Toner introduced by Gale, the PT-1 has all of the quality and reliability of the original - now with even more great features! The new PT-1 is the must-have "tone & tag" tool for every coaxial cable technician.

POCKET TONER
PATENTED
Solution SERIES

PT-1

POCKET TONERTM

PATENTED
Solution SERIES

Features:

- Uses one standard AAA battery (improved battery life over original Pocket Toners and easy to replace)
- Works with coaxial cable - with replaceable push-on F-type connector at the top of the sending unit head
- Ergonomic pocket-sized test tool with right-angle head for getting into tight areas
- "Speed-toning" threads on toner unit makes testing large cable bundles easy without the need to thread the toner into every cable connector
- Lightweight aluminum construction is durable and corrosion resistant
- New high-visibility red aluminum housing makes the new PT-1 easy to find
- Performs the following tests:
Continuity
Shorts and splitters

Applications:

PT-1 is the essential tool for every CATV technician to confirm continuity and check for short-circuits or splitters on coaxial cable in a snap!

Here are the three simple steps to identify and continuity test coaxial cable:

1

Connect sending unit with push-on F-connector to the wall plate coaxial port.

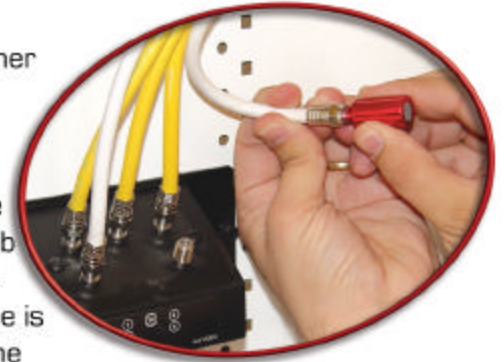

2

Check the LED at the top of the sending unit head. A red light indicates a short-circuit or splitter in the test line.

3

Unscrew the toner unit from the sending unit. Connect the toner unit to the cables at the hub location. When the correct cable is found, a loud tone will sound.
